# :DO:RE:MI:

BY ARKITEMA

:DO:RE:MI: by Arkitema is a new series of exclusive and highly functional door handle designs for high-profile architecture. The absolute focal point of :DO:RE:MI: is a thought-through design with focus on both detail and the full sensation of a building's expression and style. Thereby, :DO:RE:MI: opens new doors for creation of harmonic and elegant architecture, where all details play together.

The :DO:RE:MI: product line presents three designs that each satisfies different preferences and needs for aesthetic and functional opening of doors. Each design reinforces different architectural

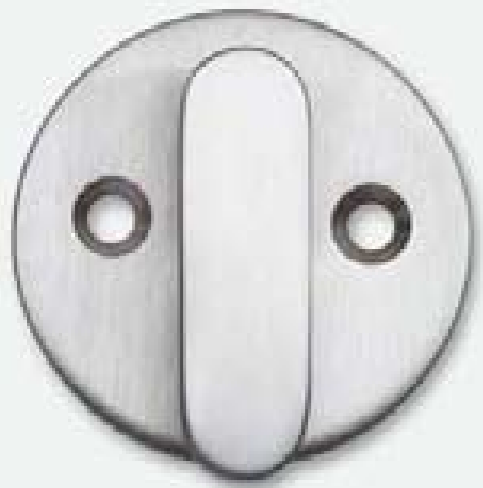

styles - from modern constructions to renovation of existing environments and buildings. Moreover, the :DO:RE:MI: designs match Ruko's comprehensive range of quality door furniture.

The foundation is long-lasting quality and strong materials combined with functionality and user-friendliness. This ensures comfortable and safe opening of doors every day. Finally, the handles can be combined with the Ruko lock and door systems and, in this way, contribute to increased security, safety and convenience in everyday life.

The :DO: series contains a wide range of accessory such as fasteners and handles that match the design line.

# :DO:

## Exclusive simplicity and modernity

This encapsulates the impression and expression of :DO:.

A tight and straight design cut out of one single geometric shape provides the DO: handle with its clear-cut expression of simplicity and modern living.

:DO: features an exclusive and modern expression suited to environments where simplicity and strong details stand out.

Design by Arkitema © 2006

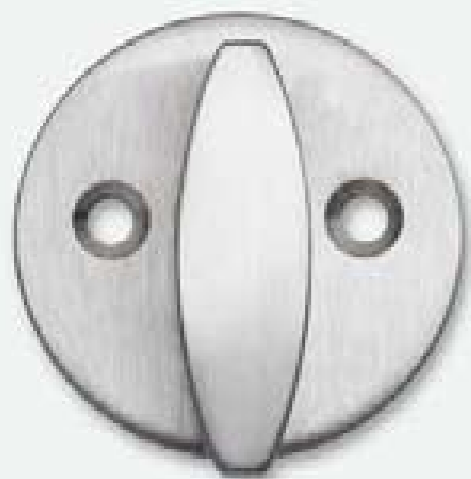

"The visual expression of door handles attributes greatly to the total expression of an environment. Shape and design must be sharp, functional and simplistic and be part the architectural experience. In all reality, door handles should not be noticed as individual parts, but as a part of the doors' and the architectural expression."

*Designer Karsten Bro, Arkitema*

The :RE: series contains a wide range of accessory such as fasteners and handles that match the design line..

## Classic and timeless arch

The classic and timeless arch is the essential and tangible centre of rotation in :RE:.

Structured around a classically swung arch, the RE: handle emphasizes a timeless and classic expression.

:RE: is especially recommended for places, where style and decoration are classic, yet allow for new details to lift the expression into this century.

*"There are some indisputable demands that must be in place when designing a door handle. It needs to be visually pleasing, recognisable and functional as well as provide a comfortable grip. Therefore, a smooth interplay between shape, function and materials are a prerequisite for the design."*

*Designer Anne Qvist, Arkitema*

## Elegance of everyday life

This is the essence of :MI:. It enhances the whole in a discreet yet distinctive way.

Featuring a rounded-off shape of a drop the MI:handle loosens up and gives room for a softness that is both elegant and friendly – to the eye and to the touch.

MI: is the perfect choice for places where contrasts are floating and details are used to emphasize the natural elegance of everyday life.

Design by Arkitema © 2006

“Finding the fine balance between the outstanding detail and the whole is the greatest challenge in ensuring harmony in an architectural expression. Door handles are a fantastic detail when they play together with architecture and space. We all use and see them every day of our lives.

Designer Anne Qvist, Arkitema

BY ARKITEMA

:DO:RE:MI: is based on the highest quality of acid-resistant stainless steel (AISI-316L) down to the last detail. This means that the handles are corrosion-proof and extremely resistant to wear and tear, wind and weather. Consequently, :DO:RE:MI: provides for strong solutions that are long-lasting and easy to maintain in both indoor and outdoor environments.

Acid-resistant stainless steel of AISI-316L quality is bacteria-resistant and offers a highly hygienic and strong choice for all environments. Supported by a functional design with a minimum of corners and curves, the handles are easy to wipe, and leave poor conditions for dirt and smudge. Finally, the steel quality binds nickel and ensures a nickel-free touch every time. It is a sound choice that is both environment and allergy friendly.

# Ruko

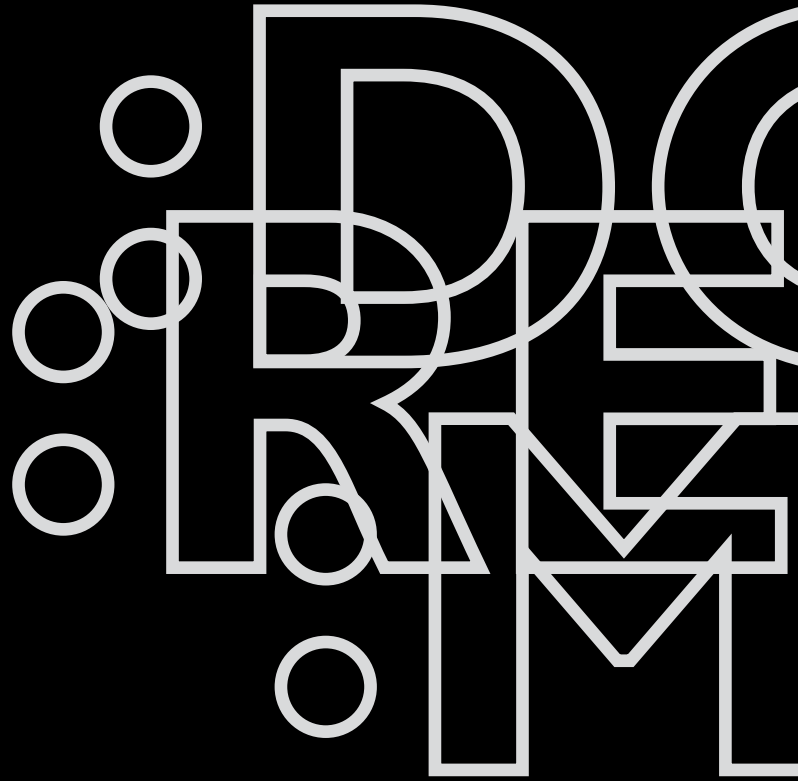

Ruko has been Denmark's leading supplier of locks and keys for more than 75 years. Today Ruko is a total supplier for the lock and security market, with a broad range of products and services which can help provide effective security in homes, institutions and commercial buildings.

Ruko focuses on supplying quality products to the high security market, with an elegant and functional design, produced and marketed with respect for human resources and the environment. Ruko works in close cooperation with its distributors who receive ongoing training in Ruko's extensive product range.
