## RUKO-LINE® - QUALITY ARCHITECTURAL HARDWARE WITH SUPREME DURABILITY

Functional Scandinavian design in high quality steel constitutes the base of the new architectural hardware range Ruko-Line® from Ruko, an ASSA ABLOY Group company .

Ruko-Line® is the aesthetic solution for all in-door and out-door environments where elegant design, durability and functionality down to the last detail are requested.

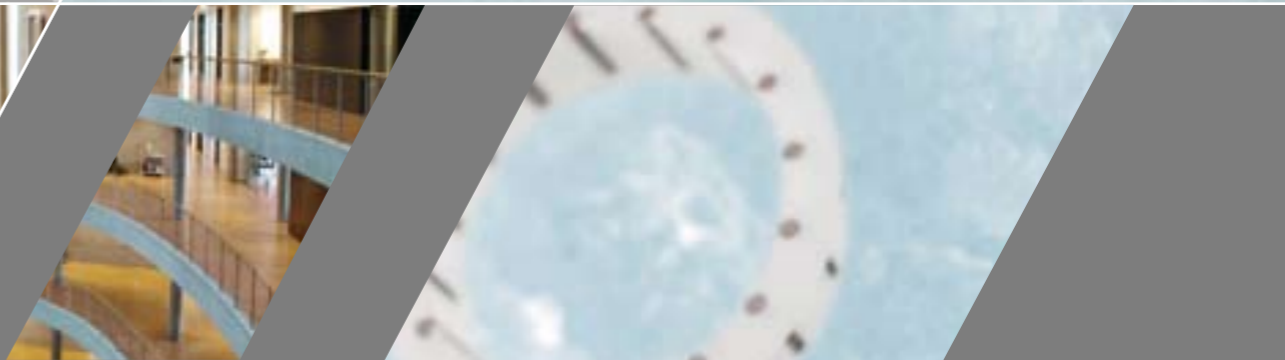

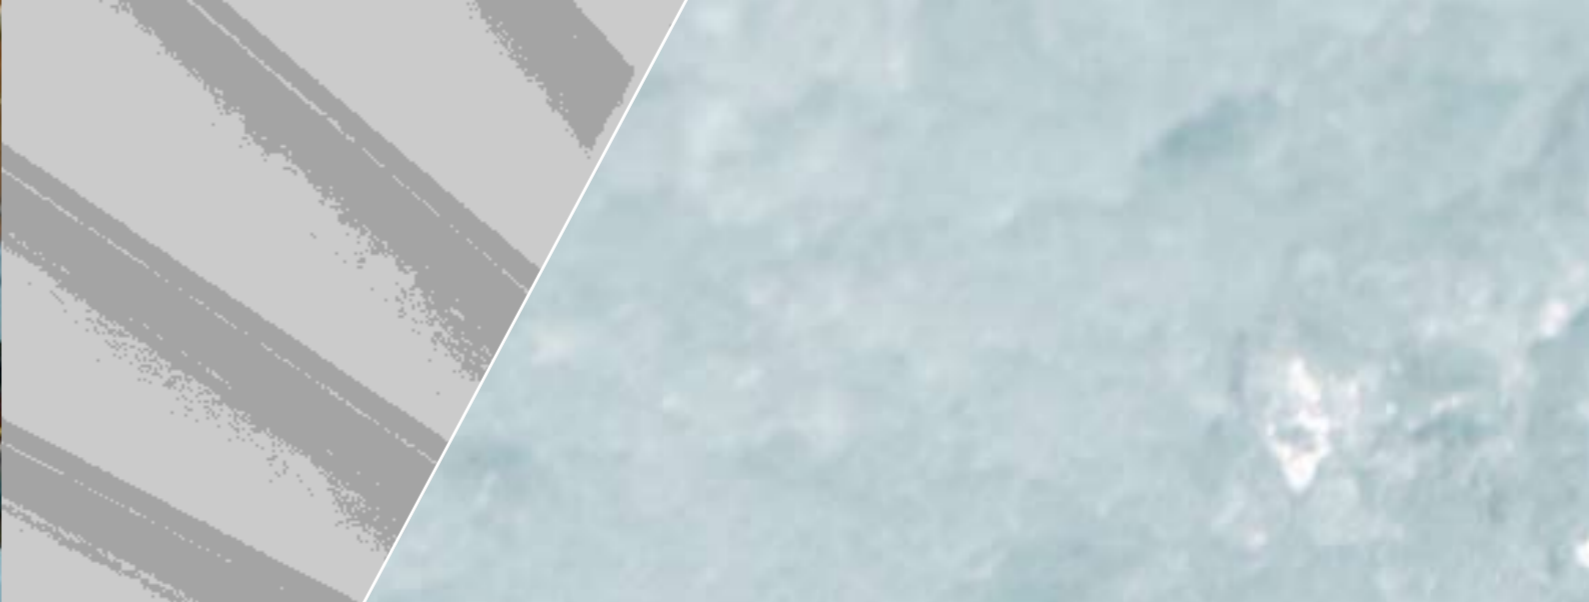

### REFLECTION IN TIME, SPACE AND SHAPE

Harmonic interaction between shape, function and material is the absolute turning point for the design of Ruko-Line® .

The clear cut shaping combined with the highest quality stainless steel results in an elegant appearance, where soft reflection of space, colours and shapes creates a perfect balance between detail and surroundings. The result is a beautiful, timeless and solid solution for design of quality projects and fascinating environments.

The modernistic style and the aesthetic appearance are consistent with contemporary architectural trends.

## TOP QUALITY IN EVERY DETAIL

### SUSTAINED QUALITY

Ruko-Line® is completed in acid-resistant stainless steel of highest quality (AISI316L) inside out. Hence, Ruko-Line® is an exceptionally durable, stable and low-maintenance solution for both in-door and out-door use.

A design with needle bearings placed directly on the lever handle minimises wear and improve durability. At the same time, this design ensures a pleasant and comfortable opening of the door.

### SUITABLE FOR ALL CLIMATES

Ruko-Line® is suitable for use in sophisticated as well as extreme

environments. The stylish hardware withstand all wind and weather conditions as well as salt water exposure, as they are made of acid-proof stainless steel down to the last detail.

This means that Ruko-Line® does not corrode or wear visibly over time in spite of heavy stress from in-door and out-door climate or extensive daily use.

### UPHOLDS HIGH HYGIENE

Ruko-Line® enables high quality solutions on places with even very strict hygienic demands, e.g. kitchens and restaurants as well as laboratories, hospitals, etc.

Acid-proof stainless steel of the AISI316L quality is bacteria-resistant. Combined with the straight lined design this secures a high degree of hygiene. The handles are easy to clean, and hooks and corners are kept to a minimum providing poor conditions for filth and dirt.

### ALLERGY FRIENDLY OPENING

We are in contact with leverhandles many times every day. AISI316L secures a nickel free surface because the steel absorbs nickel. This makes Ruko-Line® an allergy friendly solution accommodating the widespread problem of touch related allergy.

## CUSTOMIZED SOLUTIONS

A full range comprised of lever handles, door accessories, door stops, cylinder rings, etc. provides for creation of complete high quality solutions with Ruko-Line®.

To secure quality every time, all parts down to the last screw are packed together.

### OVERALL SOLUTION FOR EFFECTIVE LOCK SECURITY

Ruko-Line® is a part of Ruko's wide range of quality architectural hardware and meets the same high standards, which have positioned Ruko as the leading supplier of total solutions on the Danish lock and security market.

Also, locking security is given absolute priority, as the fittings can be combined with standard locking systems and contribute to effective security against break-ins.
